

CABLE PROTECTION

1.8.6

Interlocking Tiles

Very limited space is available for underground services, which are becoming more and more congested. Wherever cables are buried, extra protection is afforded by the use of interlocking cable tiles. When laid above the cables the tiles also act as a warning to others that may be excavating in close proximity. The tiles are available in both concrete or glass fibre with the legend "ELECTRIC CABLE" and, interlock when laid end to end.

N.B. sizes shown are nominal

Cable Warning Tape

As an additional measure tape may be laid in the trench, typically 150mm above the cable tiles. BAC Warning Tape is available in English as standard and is also available in English/Arabic. (Special orders in any other language can be arranged).

Text	Text and Colour	Width	Length (per roll)
English	CAUTION CAUTION CAUTION ELECTRIC CABLE BELOW	150 mm	365 m
English / Arabic	احذروا الموت كهرباء ضع CAUTION-ELECTRIC CABLE BELOW	150 mm	365 m
